

## About IEEMS Society

The international Electronic Engineering Mathematical Society is a new idea for international societies. May be these types of societies nowadays is strange but I am sure it will be real fact in our life some day. Let us ask ourself a question: Why we restrict ourself with traditional ways if we have all possibilities to moderate ourself and become fast in our relations. Electronic societies activities need quick procedure and the traditional - classical ways- take a lot of time to achieve such activities. I hope from everyone who have mind to think about electronic societies to save time and achieve excellent results. Prof. S. G. Ahmed

**IEEMS e-publications are linked with IMBIC publication  
IMBIC has three International branches at  
India, Sweden and Japan**

### IEEMS Vision & Mission

All mathematical societies around the world all are working in classical rules. Due to the rapid communications and the advancement in computers and the software packages

IEEMS was established to work by non-classical procedures in all its national and international activities.

IEEMS new procedure is to handle all IEEMS activities electronically.

IEEMS obey the law and any new laws control using the internet.

IEEMS main mission is to deal with all branches of basic sciences include:

Pure Mathematics

Engineering Mathematics

Industrial Mathematics

Pure Mechanics

Applied Mechanics

Pure Physics

Applied Physics

Electronics and Communications
